Hi, I'm Ben Remnant. I live in Upper Hutt in the Wellington Region. I am currently a self employed, full stack web developer. I am self motivated & passionate about all things development. In my spare time I build and program IoT devices with arduino microcontrollers.

Over the past few years I have been freelancing. My first project was designing and developing Danfoss NZ's website. The Danfoss NZ website has been the source of the majority of my income as it is the biggest project I have done. Danfoss still request new features and employ me to maintain the server and the website.

Strengths

- Graphical Design
- Functional Design
- User Friendly Design
- Search Engine Optimisation
- Client Communication
- Application Engineering
- Teamwork
- Creativity
